

Ellipse

An ellipse is a curve such that the sum of distances between any point on the curve and two fixed points, called the foci (plural of focus) is constant. The equation of an ellipse is

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$$

- > The coordinates of the center are (0,0)
- > The length of the horizontal axis corresponds to $2|a|$
- > The length of the vertical axis corresponds to $2|b|$
- > The foci are always located on the longer of the two axis
also called the major axis.
 - > if $(a > b)$, then $a^2 = b^2 + c^2$
 - > if $(b > a)$, then $b^2 = a^2 + c^2$ (c is the distance between the origin and the foci)
- > The coordinates of the vertices are $(a, 0)$, $(-a, 0)$, $(0, b)$, $(0, -b)$

Ex 2:-

$$\frac{x^2}{25} + \frac{y^2}{9} = 1$$

To Graph

$$\frac{x^2}{5^2} + \frac{y^2}{3^2} = 1$$

$$a^2 = b^2 + c^2$$

(write denominators
as perfect squares)

Ex 3Find the
equation
of the ellipse.

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$$

$$\frac{x^2}{a^2} + \frac{y^2}{6^2} = 1$$

Plug in (6.4, -3.6).

$$\frac{6.4^2}{a^2} + \frac{(-3.6)^2}{6^2} = 1$$

$$\frac{40.96}{a^2} + \frac{12.96}{36} = 1$$

$$\frac{40.96}{a^2} = 1 - 0.36$$

$$\frac{40.96}{a^2} = 0.64$$

$$\frac{40.96}{0.64} = a^2$$

$$64 = a^2$$

$$a = \sqrt{64} = \pm 8$$

$$\frac{x^2}{8^2} + \frac{y^2}{6^2} = 1$$

$$d(M, F_1) + d(M, F_2) = 2a$$

Major Axis

From standard to general and back!

$$36 \left(\frac{x^2}{9} + \frac{y^2}{4} \right) = (1)36$$

$$4x^2 + 9y^2 = 36$$

$$4x^2 + 9y^2 - 36 = 0$$

↑
General

① Multiply with
LCM

② Simplify.

③ Move every
term to LHS

From General to Standard:

Trick to create a 1 on the R.H.S of the
equation!

$$4x^2 + 9y^2 - 36 = 0$$

$$4x^2 + 9y^2 = 36$$

Divide by 36

$$\frac{4x^2}{36} + \frac{9y^2}{36} = \frac{36}{36}$$

Simplify

$$\frac{x^2}{9} + \frac{y^2}{4} = 1$$

P 332 - 335
All Questions.

$$144 \left(\frac{x^2}{9} + \frac{y^2}{16} \right) = (1) 144$$

$$16x^2 + 9y^2 = 144$$

$$16x^2 + 9y^2 - 144 = 0$$
